9.1. Scientific Animation

9.1.1. Software Dissemination and Internet Visibility

The CONVECS team distributes several software tools: the CADP toolbox (see 5.1), the TRAIAN compiler (see 5.2), and the PIC2LNT translator (see 5.3). In 2012, the main facts are the following:

- We prepared and distributed 11 successive beta-versions (from 2010-h to 2010-m, from 2011-a to 2011-c, and from 2012-a to 2012-b “Zurich”) of CADP.
- We were requested to grant CADP licenses for 1227 different computers in the world.
- We released version 2.7 of the TRAIAN compiler for LOTOS NT in November 2012.
- We released version 2.0 of the PIC2LNT translator from an applied $\pi$-calculus to LNT in October 2012.

We constructed the CONVECS Web site (see http://convecs.inria.fr) and we updated it with scientific contents, announcements, publications, etc.

By the end of December 2012, the CADP forum (see http://cadp.inria.fr/forum.html), opened in 2007 for discussions regarding the CADP toolbox, had over 230 registered users and over 1400 messages had been exchanged.

Other research teams took advantage of the software components provided by CADP (e.g., the BCG and OPEN/CAESAR environments) to build their own research software. We can mention the following developments:

- Formal modeling and verification of BPEL-based Web service composition [62],
- A specific-domain design tool for FPGA-based image and video processing system [63],
- Quantitative timed analysis of interactive Markov chains [49],
- Synchronizability for verification of asynchronously communicating systems [31],
- Deciding choreography realizability [30],
- Automata learning through counterexample guided abstraction refinement [26],
- The Reo+mCRL2 framework for model-checking dataflow in service compositions [52],
- The IDCM analysis tool for components and architectures dedicated to incremental construction [54],
- Rigorous development of composite grid services [60],
- Integrating model-based testing and analysis tools via test case exchange [28], and
- The DFTCalc tool for calculating the failure probability of a dynamic fault tree (DFT) using LNT [61].

Other teams also used the CADP toolbox for various case studies:

- Learning and testing the bounded retransmission protocol [27],
- Specification and validation of a real-time simple parallel kernel for dependable distributed systems [40],
- Abstraction-based malware analysis using rewriting and model checking [32], and

7.2. Popularization

In 2012 our team has invested a large amount of time and energy in reaching out, in close collaboration with our support staff:
• The “Understanding Software” symposium with more than 250 participants from industry and academia. This was organized in honor of celebrating the 40th anniversary of Paul Klint at CWI. The symposium was a great success, with internationally renowned speakers and a large and diverse audience. The topic was entirely devoted to the research topics of our team.

• Turing centennial exposition, including Enigma machine and X1, hosted more than 1000 visitors.

• Lego Turing Machine, including IDE, was an online hit with millions of viewers. Articles about the machine and its meaning appeared in all major Dutch journals and we estimate a reach of more than 3 million readers.

• ICT Delta - we presented at the Dutch national symposium ICT Delta where industry meets academia in ICT.

• Floor Sietsma appeared on national television and radio, and in most newspapers to explain about her role as the youngest PhD candidate and her research.

• Paul Klint chaired public discussion on Government Data Policy, IPoort, The Hague, April 10, 2012

• Jurgen Vinju went to different companies to explain about Rascal and building your own software metrics, and software engineering in general (Sogyo, Software Factory)

Its usage is described in the new edition of the Spark book (http://www.altranpraxis.com/book/, Chapter “Advanced proof tools”)

• In the context of the Hi-Lite project, the Adacore company (Paris) implements a new tool GnatProve which aims at formal verification of Ada programs. They translate annotated Ada code into the Why3 intermediate language and then use the Why3 system to generate proof obligations and discharge them with Alt-Ergo, or other available back-end provers. GnatProve is a prototype that aims at becoming the successor of Spark (http://www.open-do.org/2012/11/30/future-version-of-spark-will-be-based-on-ada-2012/).

• S. Conchon, A. Mebsout and F. Zaidi (ForTesSe team, LRI) continued their collaboration with S. Krstic and A. Goel (Intel Strategic Cad Labs in Hillsboro, OR, USA) that aims in the development of the SMT-based model checker Cubicle (http://cubicle.lri.fr).

9.5. Popularization
Since April 2008, S. Boldo is member of the editorial committee of the popular science web site http://interstices.info/.

S. Boldo, scientific head for Saclay for the MECSI group for networking about computer science popularization inside Inria.

S. Boldo, member of the popularization committee, comité de médiation scientifique, of Inria.

S. Boldo visited two classes for the beginning of the computer science teaching in 2nde: lycée Jean Jaurès at Chatenay-Malabry and Jacques Monod at Clamart in January 2012.

S. Boldo is responsible for a mission doctorale for popularization. She is in charge of Li Gong of the LIMSI laboratory.

S. Boldo, head for the Fête de la science for the LRI laboratory in 2012. The laboratory welcomed both industrials, pupils and general public: 6 different stands, 6 classes, a total of more than 250 visiting persons.

S. Boldo and A. Charguéraud belong to the organization committee of the Castor informatique http://castor-informatique.fr/, an international competition to present computer science to pupils (from 6ème to terminale). More than 91,000 teenagers played on the 40 proposed exercises in November 2012.

C. Lelay and A. Tafat are involved in the Fête de la science 2012.
